RESEARCH HIGHLIGHTS

My research advances fundamental optimization methods, including bi-level, second-order, zeroth-order, sharpness-aware optimization, to build trustworthy and efficient AI systems. While application-driven, my work is grounded in algorithmic innovation, aiming to bridge theoretical foundations with real-world deployment. See my [research roadmap](#).

1. MACHINE UNLEARNING AND KNOWLEDGE EDITING ON LLMs AND DIFFUSION MODELS

I am among the early researchers shaping the field of *machine unlearning*, developing methods that span a broad range of model families, including diffusion models [\[ICLR'24\]](#), [\[ECCV'24\]](#), [\[NeurIPS'24\]](#), [\[NeurIPS'24\]](#), LLMs [\[NeurIPS'24\]](#), [\[ICML'25\]](#), [\[ICML'25\]](#), and MoE-LLMs [\[ACL'25\]](#). My work introduces principled algorithms, certified evaluation protocols, and new benchmark datasets for trustworthy unlearning, and uncovers a pervasive yet overlooked issue of 'fake unlearning', see my invited [talk](#) at Shanghai AI Lab.

2. LLM ZEROth-ORDER FINE-TUNING AT INFERENCE-LEVEL MEMORY COST

I envision a scalable future of LLM tuning that leverages commodity hardware by relying solely on *inference-level memory*. My work [\[ICML'24\]](#) introduces the first comprehensive benchmark and toolbox for zeroth-order LLM optimization, demonstrating that gradient-free tuning can match backprop-based methods when combined with practical tactics and theoretical insights, also highlighted by my [AAAI'24 tutorial](#).

3. BI-LEVEL OPTIMIZATION FOUNDATIONS FOR LARGE-SCALE MACHINE LEARNING PROBLEMS

Many fundamental machine learning tasks—ranging from model pruning and fairness to adversarial training and transfer learning—can be elegantly cast as *bi-level optimization* (BLO) problems. My research shows that with carefully designed solvers, BLO formulations can lead to significant performance gains [\[ICLR'23\]](#), [\[NeurIPS'22\]](#), [\[ICML'22\]](#). I delivered a tutorial at [AAAI'23](#), providing both theoretical foundations and practical tools to advance the understanding and application of BLO methods in modern ML.
